## About Us

### **Our Story**

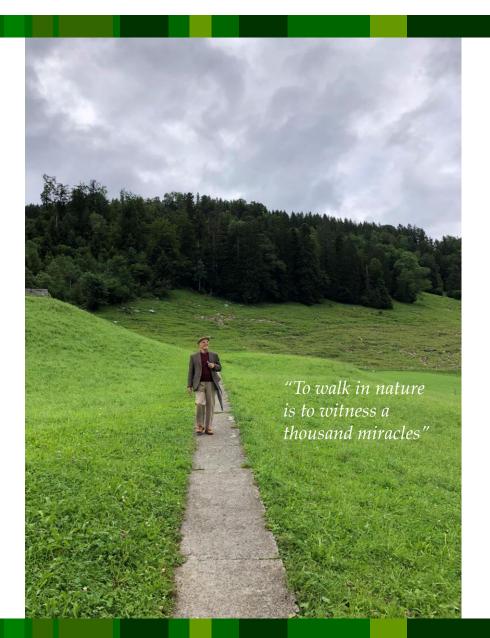

**Dr Mahmoud Akhavan**Founder & Managing Director

Al Sidra Landscaping's vision began more than 50 years ago, when Dr. Mahmoud Akhavan moved to the US in 1968 to pursue his education (B. Sc. & M. Sc in Engineering) and his doctorate in Agriculture & Landscaping with a vision to transform the Middle East through landscape beautification and agriculture.

With over 30 years of Agriculture, Landscaping & Engineering experience working in the USA, Netherlands, France, and the UAE, Dr. Akhavan has dedicated his life and expertise to achieving his vision by bringing gardens to life and happiness to homes across the UAE.

### **Our Story**

Landscaping Regional

### An oasis of plants, trees, water, and lights – the Al Sidrah way

Dr. Mahmond Ali Akhavan

"Look outside for the money!" This is a popular byfine going around the landscaping business. Why not, when landscapes and hardscapes greate a unique appeal to property. If a lawn is patchy, its trees are on their deathbed and the plants are a poor excuse for flora, it isn't going to matter what kind of magic you've worked indoors. A good landscape provides a welcome boost in the value of a property.

Such realism is imbedded in Al Sidrah Landscaping's five principles, which have years of business: integrity, innovation, customer satisfaction, quality, and reputation. Affirmed Dr. Mahrmood Ali Althewan, managing director: "We keep our clients satisfied by offering first-class service and constantly searching for new ideas and constantly searching for new ideas and new technologies. Libewise, we give them competitive rates. This way, we preserve our good reputation."

As if to say that every piece about Al Sidrah is an important part of a whole, Mahmood went on to discuss the company's humble beginnings: "When we established Al Sidrah ten years ago, I dich't foresee the booming of the landscaping industry in Dubai, "Yet, in my mind I knew that the Dubai environment needed some greens." He continued, "Aside from the aesthetics, the purpose of the greening was environmental—the place needed trees and plants to control the sand movement in the desert."

After staying in the US for 20 years and getting his PhD and Doctorate degrees in horticulture, this hanian native shard to deny. The mixture of culture attracted me, along with the sense of freedom and similarities with the facilities of the West.\*

Al Sidnah's head office in Duba is made up of

a professionally qualified team of project engineers, landscape designers, foremen, and gardeness. Under the leadership of Dr. Mahmood, the company offers a wide range of services in all areas of landscaping, including agricultural consultation, landscape design, trigation, and project maintenance. Discussing the difference between landscape design and landscape decoration, his noncrease remarked was, 'Design is the integration of what the clients want and what we can do for them. The key is sitting down with them and estracting their own inputs."

The company manages a nursery in AI Aweer where they grow and maintain foliage such as palm trees, flowering trees, shubs, seasonal flowers, among others. Moreover, AI Sithah maintains a few showncoms in different agricultural shops all over the Emirates.

Al Sidrah's impressive list of projects includes government and private properties, airports, parks, villas, farms, industrials and commercial areas.

Its growth did not come without some adjustments. Said Mahmood, "When we started, there was not many trees and plants to be seen in Dubai. Today, the people appreciate greeneries — knowing that it has aesthetic and environmental benefits."

Although aware of the current huge competition in the landscaping business, Mahmood could not care less. He remarked, 1 predict that the number of industry players will increase in the years to come. But so will the market. Rest assured, Al Sidrah will continue to provide better quality service at a lesser price."

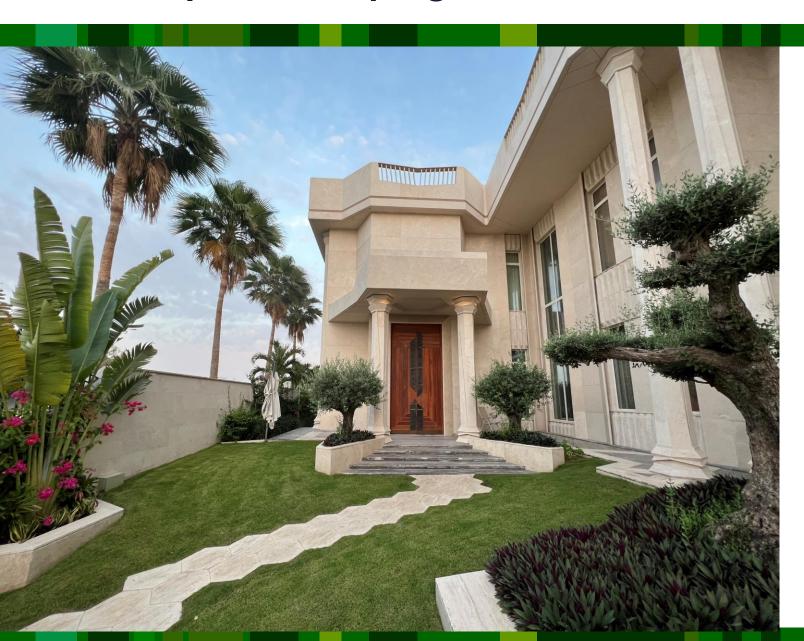

Al Sidrah generally employs automatic irrigation system in their projects. Its presence extends to other parts of the Middle East region.

## Irrigation Services

## **Irrigation Services**

Al Sidra's irrigation engineering team designs and installs reliable irrigation systems tailored to the requirements of each landscape project by carefully assessing water requirements based on the design of each project.

We use the latest irrigation best practices and equipment from USA and European manufacturers (pumps, valves, controllers, piping systems, spray heads, bubblers and drippers) to effectively provide adequate water based on plant water requirements which may vary depending on plant size, type, and environmental factors.
